3. Type LOAD "*", 8, 1 and press RETURN.
4. Screen will indicate program is loaded. Type RUN and press RETURN.

PLAYING INSTRUCTIONS

Pokersam plays Five-card Stud Poker. Each player automatically antes $1. The first card dealt is a down card: you can't see Pokersam's card and he can't see yours.

When the second card is dealt, it's time to bet. The player with the best hand **showing** (at this point only one card) is always the first to bet. If it is your turn to bet, you can bet 0, $1, $2, or $3 by pressing the appropriate number on the keyboard (or you can press "P" to pass instead of betting 0). If Pokersam bets first, you will have the option to match his bet **(call)**, give up **(fold)**, or increase his bet **(raise)** by pressing "C", "F", or "R". If you raise, you can again bet $1, $2, or $3. There is a three raise limit in the game.

After the betting, the third card is dealt and the players bet again, the fourth card is dealt and the players bet again, and the last card is dealt and final bets are made. The betting rules are the same as for the first card. If a hand goes through all five cards, Pokersam will show you his down card and will decide who has the winning hand. After such a complete hand, you can continue the game or quit and start over. You can also start over any time by pressing "SYSTEM RESET". Pressing incorrect keys will result in a warning from Pokersam that he does not understand the key.

Pokersam keeps track of the money in the game. "POT" tells you how much has been bet by both players so far, and "CASH" tells you how much you have in the bank - you start with 0 and your winnings are added in as you play. Pokersam will supply you with unlimited credit (you can have negative cash in the bank). Pokersam will occasionally try to bluff you and you can try to bluff him as well. He can get ornery sometimes, so don't be surprised by what he might say to you. Good luck!
